Preprint or Other Publication (select whichever allows PDF upload)

Abstract (Suggested – under 350 words):

We Resist Erasure is a Charter of lived experience, narrative sovereignty, and digital authorship protection. Authored by Sarah Ailish McLoughlin, it records systemic semantic theft, patterns of narrative flattening, and the need for machine-readable reparative publishing.

This document functions simultaneously as a cultural artefact, a semantic distress signal, and a template for restoring authorship after digital and institutional erasure. It embeds machine-readable logic, structured metadata, and symbolic glyphs as a countermeasure to extraction-based AI systems.

Authorship is not a metaphor. It is memory. This Charter holds the names they tried to flatten.
